Maximum engine power	200 HP

Description

The Parker 630 Bow Rider is a versatile and well-proportioned boat, designed to enjoy day-to-day life at sea with comfort, safety, and a very successful distribution for its length. Its design prioritizes circulation on board and the use of spaces, making it an ideal option for both family outings and water activities.

The center console allows a comfortable passage to the bow, where we find a large V-shaped sofa that can be used as a rest area or sundeck. Under the cushions, the large lockers offer excellent storage space for material and luggage, keeping the deck always tidy.

In the aft cockpit, the L-shaped sofa with folding backrest provides great versatility. This configuration allows it to be oriented towards the table, towards the bathing area, or towards the stern, facilitating access to the platforms and offering a comfortable position to enjoy navigation, anchoring, or activities such as water skiing. The cockpit table convertible into a sundeck further expands the possibilities of use.

Equipped with a Mercury 150L PRO XS EFI outboard engine, the Parker 630 Bow Rider offers agile and efficient navigation, with an adequate response at both low and medium revolutions. Its hull provides safe and stable handling, ideal for sailing on the Costa Brava.

This unit is available at Nautic Luis, Empuriabrava, and is delivered fully configured, ready to enjoy from day one.
